A wound treatment kit for use in negative pressure wound therapy comprising a first container, a second container, and a third container. The first container comprises wound and skin preparation materials, the second container comprises wound dressing materials, and the third container comprises wound sealing materials. The first container further comprises a first label providing information directing the user to use the wound and skin preparation materials first in sequence before the wound dressing materials and the wound sealing materials. The second container further comprises a second label providing information directing the user to use the wound dressing materials second in sequence after the wound and skin preparation materials and before the wound sealing materials. The third container further comprises a third label providing information directing the user to use the wound sealing materials third in sequence after the wound and skin preparation materials and the wound dressing materials.
